MEDLINE-93180173; PubMed-8383238;
Birkenbach M.P., Josefsen K., Yalamanchili R.R., Lenoir G.M.,
Kieff E.;
"Epstein-Barr virus-induced genes: first lymphocyte-specific G
protein-coupled peptide receptors.";
J. Virol. 67:2209-2220(1997).
FUNCTION: ORPHAN RECEPTOR. PROBABLE MEDIATOR OF EBV EFFECTS ON B
LYMPHOCYTES OR OF NORMAL LYMPHOCYTE FUNCTIONS.
TISSUE SPECIFICITY: B-LYMPHOCYTE CELL LINES.
INDUCTION: BY EBV.
SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
CAUTION: IT IS UNCERTAIN WHETHER MET-1 OR MET-5 IS THE INITIATOR.
                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes isolated polypeptides comprising specific immunogenic portions of Babesia microti. AAX88983 to AAX88994 encode specifically claimed B. microti immunogenic proteins, and AAV24327 to AAY2438 represent these proteins. B. microti polypeptides and nucleic acids can be used for detecting B. microti infections. They can also be used in vaccines for inducing protective immunity against B. microti infections. The present sequence encodes a B.microti antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Babesia microti; antigen; immunogen; diagnosis; infection; vaccine;
    transformed cells and antibodies, useful for diagnosis of
                                                                                                 The sequence is that of a polypeptide comprising at least one antigenic portion of a Babesia microti antigen. It can be used to diagnose B. microti infection by detecting specific antibodies in usual immunoassays. Infection can also be diagnosed using:
(a) primers or probes derived from the coding sequence, in standard amplification or hybridisation tests, or (b) using antibodies to detect the corresponding antigen. It is also useful in vaccines to protect against infection, especially when formulated with an adjuvant. The new diagnostic methods allow rapid differentiation between B. microti infection and other tick-borne diseases (Lyme disease and ehrlichiosis) that have similar symptoms but require different treatments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention is related to the isolation of antigenic sequences from the rodent parasite Babesia microti. This organism is transmitted to humans by the same tick which transmits Lyme disease and ehrlichiosis. The organism causes a malaria-like infection known as babesiosis. The sequences identified by this invention can be used in the diagnosis, prevention and treatment of babesiosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polypeptides containing an antigenic portion of Babesia microti antigen and DNAs encoding the polypeptides, useful for diagnosing, treating or preventing B. microti infection, or for inducing protective

The present invention relates to novel Babesia microti antigens and their coding sequences. The B. microti antigens, antigenic epitopes of such antigens, and compositions comprising such antigens are useful for diagnosing and treating B. microti infection. The compositions are especially useful for enhancing immune response against B. microti infection. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptides containing an antigenic portion of Babesia microti antigen and DNAs encoding the polypeptides, useful for diagnosing, treating or preventing B. microti infection, or for inducing protective immunity in a patient
                                                                                                                                                                                                                 New Babesia microti antigens, useful for diagnosing and treating B. microti infection, and as component of a composition for enhancing immune response against B. microti infections \,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to novel Babesia microti antigens and their coding sequences. The B. microti antigens, antigenic epitopes of such antigens, and compositions comprising such antigens are useful for diagnosing and treating B. microti infection. The compositions are especially useful for enhancing immune response against B. microti
                                                                                                                                                                                                                                                                                                                                                                                                         Homer MJ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   infection. The present sequence was used to illustrate the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New Babesia microti antigens, useful for diagnosing and treating B microti infection, and as component of a composition for enhancing immune response against B. microti infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ..

        The present invention is related to the isolation of antigenic sequences from the rodent parasite Babesia microti. This organism is transmitted to humans by the same tick which transmits Lyme disease and ehrlichiosis. The organism causes a malaria-like infection known as babesiosis. The sequences identified by this invention can be used in the diagnosis, prevention and treatment of babesiosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to novel Babesia microti antigens and their coding sequences. The B. microti antigens, antigenic epitopes of such antigens, and compositions comprising such antigens are useful for diagnosing and treating B. microti infection. The compositions are especially useful for enhancing immune response against B. microti infection. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Α.

The B. microti antigens, antigenic epitopes of such antigens, and compositions comprising such antigens are useful for diagnosing and treating B. microti infection. The compositions are especially useful for enhancing immune response against B. microti infection. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New Babesia microti antigens, useful for diagnosing and treating B microti infection, and as component of a composition for enhancing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

                                                                                                                                                                                                                    The present invention relates to novel Babesia microti antigens and to coding sequences. The B. microti antigens, antigenic epitopes of such antigens, and compositions comprising such antigens are useful for diagnosing and treating B. microti infection. The compositions are especially useful for enhancing immune response against B. microti infection. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention is related to the isolation of antigenic sequences from the rodent parasite Babesia microti. This organism is transmitted to humans by the same tick which transmits Lyme disease and ehrlichiosis. The organism causes a malaria-like infection known as babesiosis. The sequences identified by this invention can be used in the diagnosis, prevention and treatment of babesiosis.
                                                                                                                                                                                                                                                                                                                                                                  New polypeptides containing an antigenic portion of Babesia microti
antigen and DNAs encoding the polypeptides, useful for diagnosing,
treating or preventing B. microti infection, or for inducing protective

The present invention is related to the isolation of antigenic sequences from the rodent parasite Babesia microti. This organism is transmitted to humans by the same tick which transmits Lyme disease and ehrlichiosis. The organism causes a malariar like infection known as babesiosis. The sequences identified by this invention can be used in the diagnosis,
antigen and DNAs encoding the polypeptides, useful for diagnosing, treating or preventing B. microti infection, or for inducing protective immunity in a patient \,
                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Protozoacide; vaccine; antigen; antigenic epitope; infection

AAX88983 to AAX88994 encode specifically claimed B. microti immunogenic proteins, and AAY24327 to AAY2433 represent these proteins. B. microti polypeptides and nucleic acids can be used for detecting B. microti infections. They can also be used in vaccines for inducing protective immunity against B. microti infections. The present sequence represents a B. microti antigen BMNI-17 degenerate repeat sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                     The present invention relates to novel Babesia microti antigens and their
                                                                                                                                                                                                              coding sequences. The B. microti antigens, antigenic epitopes of such antigens, and compositions comprising such antigens are useful for diagnosing and treating B. microti infection. The compositions are especially useful for enhancing immune response against B. microti infection. The present sequence was used to illustrate the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   specific immunogenic portions of Babesia microti. AAX88981 to AAX889994 encode specifically claimed B. microti immunogenic proteins, and AAY44317 to AAY4338 represent these proteins. B. microti polypeptides and nucleic acids can be used for detecting B. microti infections. They can also be used in vaccines for inducing protective immunity against B. microti infections. The present sequence represents a B.microti antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Babesia microti; antigen; immunogen; diagnosis; infection; vaccine;
                                                                                                one addition to portion of a Babbasia microti antigen. Trean be used to diagnose B. microti infection by detecting specific antibodies in usual immunoassays. Infection by detecting specific antibodies in usual immunoassays. Infection can also be diagnosed using:

(a) primers or probes derived from the coding sequence, in standard amplification or hybridisation tests, or (b) using antibodies to detect the corresponding antigen. It is also useful in vaccines to protect against infection, especially when formulated with an adjuvant. The new diagnostic methods allow rapid differentiation between B. microti infection and other tick-borne diseases (Lyme disease and ehrlichiosis) that have similar symptoms but require different treatments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       present invention describes isolated polypeptides comprising

                                                                                                                                                                                                                                              Sequence 53, Application US/09528784A

Patent No. 6451315

GENERAL INPORMATION:
APPLICANT: Lodes, Michael J.
APPLICANT: Houghton, Raymond L.
APPLICANT: Aleath, Paul R.
APPLICANT: Moughton, Raymond L.
APPLICANT: Moughton, Raymond L.
APPLICANT: Houghton, Raymond L.
APPLICANT: Moughton, Raymond L.
APPLICANT: McNeill, Patricia D.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR THE DIAGNOSIS
TITLE OF INVENTION: AND TREATMENT OF B. MICROTI INFECTION
FILE REFERENCE: 210121.42664
CURRENT APPLICATION NUMBER: US/09/528,784A

CURRENT APPLICATION NUMBER: US/09.528,784A

NUMBER OF SEQ ID NOS: 90

NUMBER OF SEQ ID NOS: 90

SOFTWARE: FastSEQ for Windows Version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB 3; Length 1430;

H71809
glutamine fructose-6-phosphate transaminase (isomerizing) (EC 2.6.1.16) - Helicobacte C; Species: Helicobacter pylori
A; Variety: strain J99
C; Date: 12-Feb-1999 #sequence_revision 12-Feb-1999 #text_change 19-Jul-2002
C; Accession: H71809
